

Rescue Tube Cover Instructions

Thank you for your purchase of eLifeguard.com Rescue Tube Cover. Please note that Neoprene tends to stretch out over time. For this reason, we have designed the new and improved eLifeguard.com Rescue Tube Covers to go on considerably tighter at first but will therefore in turn greatly increasing the life and usability of the cover. Putting the cover on the tube the first time will take a few minutes longer and a little more care but the final result will be well worth the effort. For proper installation, we suggest that you go to the following link for a short video demonstration:

Thanks again!

eLifeguard.com

TIP: Leaving the cover(s) out in the sun for a short time to heat up will increase the elasticity of the material allowing them to be put on easier.
